smart engineering for  
extreme environments

# Whittaker Controls

Whittaker Controls, acquired by Meggitt in 1999, is a market leader in the design and manufacture of a broad range of fluid control devices and systems for commercial and military aircraft, and numerous industrial applications. It has been a signature supplier of these products since its formation in 1942.

The company entered the aviation fuelling industry in 1993 when it acquired Thiem Industries, and has since established itself as the largest provider of ground fuelling products and services in North America for the commercial and military aircraft refuelling market, as well as the tanker segment of the market. Its product line includes fuelling nozzles, bottom loading products, hydrant couplers and control valves. Whittaker has the most complete line of underwing nozzles, designed to fit the application for the world's largest commercial airports, as well as small community facilities.

Whittaker has a global product support presence through an extensive network of stocking distributors. The company's state-of-the-art in-house test facilities simulate the actual operating environment of its products, thus ensuring that hardware meets customer quality standards and requirements.

# Avery-Hardoll

Avery-Hardoll products and services can be traced as far back as 1932. Since then, it has expanded into the design and production of bulk meters, couplings, valves and associated fluid management products and services, resulting in a brand name that is well-known throughout the world. Its market share is largely concentrated in Europe.

The company's extensive line of products includes: bulk meters, couplings, fluid transducers, control valves and filtration elements. Applicable industries for its products include aviation, marine, oil and gas and military. Its test facilities and related skills are acknowledged as ranking among the best in the business. Avery-Hardoll's comprehensive range of filter water separator coalescer elements is important for removal of water from aviation fuel, diesel fuel, gas condensate, solvents and gas.

## Company overview

In August 2005, Meggitt PLC, the international aerospace, defense and electronics group, acquired UK-based Avery-Hardoll, joining its operations with Whittaker Controls in California and merging its fuelling capabilities into a new company, Meggitt Fuelling Products.

The combination of these two companies resulted in the formation of a world leader in the development, production and installation of a wide array of ground fuelling products and services.

Meggitt Fuelling Products is staffed by a large number of highly experienced sales, marketing and technical personnel who are located in the US, the UK and in Asia.
